

SDC Workspace

Product Requirements Document (PRD)

Version: 1.0

Organization: SDC India

Status: Draft

1. Executive Summary

SDC Workspace is an integrated enterprise platform combining HRMS, CRM, Project Management, Attendance, Document Management and Collaboration into one application integrated with Google Workspace. It replaces fragmented tools with a unified digital workplace.

2. Vision

Build a secure, scalable and modern workspace that becomes the operational hub for SDC India.

3. Objectives

Centralize operations; improve productivity; automate HR; manage CRM; manage projects; integrate Google Workspace; provide reporting and future AI capabilities.

4. Scope

In scope: Authentication, Dashboard, Employees, Attendance, Leave, Tasks, Projects, Meetings, CRM, Documents, Reports, Notifications, Administration. Out of scope V1: Payroll, Client Portal, Finance.

5. Stakeholders

Management, HR, Employees, Team Leads, Project Managers, Sales Team, IT Administrators.

6. User Roles

Super Admin, Admin, HR, Team Lead, Project Manager, Employee, Sales. RBAC controls access.

7. Functional Modules

Authentication using Google Workspace OAuth.

Dashboard with KPIs.

Employee Management.

Attendance & Shift Management.

Leave Management.

Task & Assignment Management.

Project Management.

Meeting Scheduling with Google Meet.

CRM for Leads, Contacts and Opportunities.

Document Management using Google Drive.

Reports & Analytics.

Notifications.

Administration.

8. Employee Management

Employee profiles, departments, designations, reporting hierarchy, onboarding, documents, status tracking and search.

9. Attendance

Check-in/out, breaks, shifts, holidays, work hours, attendance reports, approval workflows.

10. Task & Project Management

Create, assign, prioritize and track tasks. Kanban boards, milestones, project progress, attachments and comments.

11. CRM

Lead capture, contact management, opportunities, activities, follow-ups, pipeline and Gmail integration.

12. Google Workspace Integration

Google OAuth, Gmail API, Calendar API, Meet, Drive, People API and Directory integration. Use Google as source of identity.

13. Non-Functional Requirements

Performance, scalability, availability, security, accessibility (WCAG), maintainability, responsive design and auditability.

14. Security

Auth.js v5, domain restricted login, RBAC, encrypted secrets, audit logs, soft delete, validation, rate limiting.

15. Technical Overview

Next.js App Router, TypeScript, Tailwind CSS, shadcn/ui, Prisma ORM, PostgreSQL (Neon), Vercel deployment.

16. Reporting

Attendance, HR, CRM, Projects, Productivity dashboards, exports and filters.

17. Notifications

Email and in-app notifications for approvals, reminders, meetings and assignments.

18. Roadmap

Phase1 Foundation; Phase2 Attendance/Tasks; Phase3 Projects/Meetings; Phase4 CRM/Documents; Phase5 AI & advanced modules.

19. Risks

API quota limits, adoption, permissions, synchronization failures. Mitigate using retries, monitoring and documentation.

20. Acceptance Criteria

Secure login, role-based access, successful module workflows, reporting accuracy, Google integration, responsive UI, deployment on Vercel.
